

Create Hilarious Avatars in Simple Steps

As application software, VIVID Avatar Maker® lets the user create avatars in simple steps. Hilarious, "look-alike" avatars of friends or family members can be created to show or use in games. Full of amusing elements, VIVID Avatar Maker provides a new form of enhanced communication.

VIVID Avatar Maker®

VIVID Avatar Maker can create, store, edit, and send or receive portrait avatars in simple steps, based on photographs taken by the user or stored in the data folder. By default, VIVID Avatar Maker arranges specific physical features, which can be modified to create a look-alike. The finished avatar can be exported in JPEG, GIF, or SWF format for use as a picture font element or Flash material, as well as in 3D game data format. The exported formats enable the avatar to be displayed in text messages, games and character UIs.

Highly Expressive 3D Avatar Creation Process

[Commercial Adoption Examples]
